December 2010

President's Message

This month's club meeting will be held on Thursday the 9th December at the American Fork Rec Center located at 454 North Center Street in American Fork. The biggest thing that we need to accomplish is defining the presidency for next year. I am going to give somebody else the chance to enjoy being president for next year, and Michaun would like to give somebody else a chance to work on the Glitch. There are a few other positions in the presidency that we need to firm up for next year as well, and we will need volunteers to help out with the activities that the club will be putting on next year. So please come to the meeting and help us get it figured out. Another thing we thought we be fun to do for the meeting is to invite people to bring anything that they have that is RC related that would be interesting to talk about. It could be an old engine, your flight box, or a cool tool.

The cold has been kind of fun to fly in. It always presents a few challenges that are unique. Engines are harder to start and require re-tuning, batteries don't put out as much energy and run down sooner, thumbs freeze, and sometimes you need to take off and land from snow. Despite all this, the planes fly better. Once the engines are tuned up, they put out more power. Not only do the engines put out more power, but the planes are flying through denser, thicker air. The planes fly better in the denser air that the cold weather brings. The cold winter air is typically much smoother than the more turbulent warm summer air. Feel free to come out and fly with us. There will be a few of us "die-hards" out there throughout the winter.

We plan to do an unofficial freeze fly on the 1st of January. Come out to the field in the morning and start the new year doing something cool. (Literally--fly in the cold!) Bring some hot chocolate if you like, and anything that might be handy to keep us warm. The wood burning stove does a pretty good job. If you have portable heaters they might be nice as well.

We are still planning on the banquet in January. We will give you more details in the next newsletter.

Thanks,
Paul

Expert Model Repair/Building Service

Got more money than time? Don't trash that crash—Let me repair it for you. I'm unemployed at present and I've been told I'm a pretty good builder.

Let's talk and see if I can help you out with that crashed ARF or even new ARF Assembly or Kit building. Call for estimate. References available
